Natural Latex Rubber Foam

Sapna®

What is Latex?

Natural latex rubber is harvested mainly in the form of the latex from the rubber tree. The latex is a sticky, milky colloid drawn off by making incisions in the bark and collecting the fluid in vessels in a process called "tapping". The latex then is refined into rubber ready for commercial processing. Natural latex is biodegradable and naturally resistant to mold, mildew & bacteria. Natural latex, as its name implies, is "natural" which offers many benefits for use in sleep products. The elasticity, healthiness, and ability of Natural Latex to conform to your body, reducing pressure on your muscles and circulation is unsurpassed. The resulting benefits and luxurious comfort simply can't be matched by synthetic latex.

Benefits of Sleeping on Organic Sleep Latex Mattresses

Minimal Partner Disturbance : Movement on any side of the mattress does not result in any movement on the other side, so no one is disturbed by any unwanted motion. Natural latex prevents 'roll together', a normal complaint if one sleeper weighs more than the other.

Safe for your kids : Non-toxic & 100% natural material.

Healthy : A natural latex mattress is a perfectly healthy choice since it is safe even for suffers of asthma or hay-fever who may be sensitive to dust or synthetics.

Self-Ventilating Structure : A natural latex mattress has millions of interconnecting air cells which self-ventilate as a result of sleeping movements. The net result is a cool and comfortable sleep.

Uniform Support : The surface pressure on the body is reduced to a minimum, thus eliminating the 'hammock' feeling.

Bacteriostatic Properties : Our natural latex mattresses are 100% fungus free and possess antibacterial properties which will last for many years.

Dust Mite and Bed Bug Resistant : Due to the natural properties of latex, dust mites (which aggravate asthma) and bed bugs are discouraged from breeding.

Certified 100% pure and natural : Our natural latex mattresses are made using 100% natural rubber and are free from any harmful or toxic substances as well entirely biodegradable and environmentally friendly.

Long Lasting : Our natural latex mattresses have an outstanding durability. They can last for up to 20 years. Each of our latex mattresses come with a 10 years guarantee.

Chemical Free Production : Our natural latex mattresses are manufactured without using toxic chemicals which may leave a residue in the product & keep it knot free.

Support and Comfort : Natural latex mattresses help keep the spine correctly aligned. The latex foam has been orthopedically designed to have different posture zones for optimal posture and lumbar support.

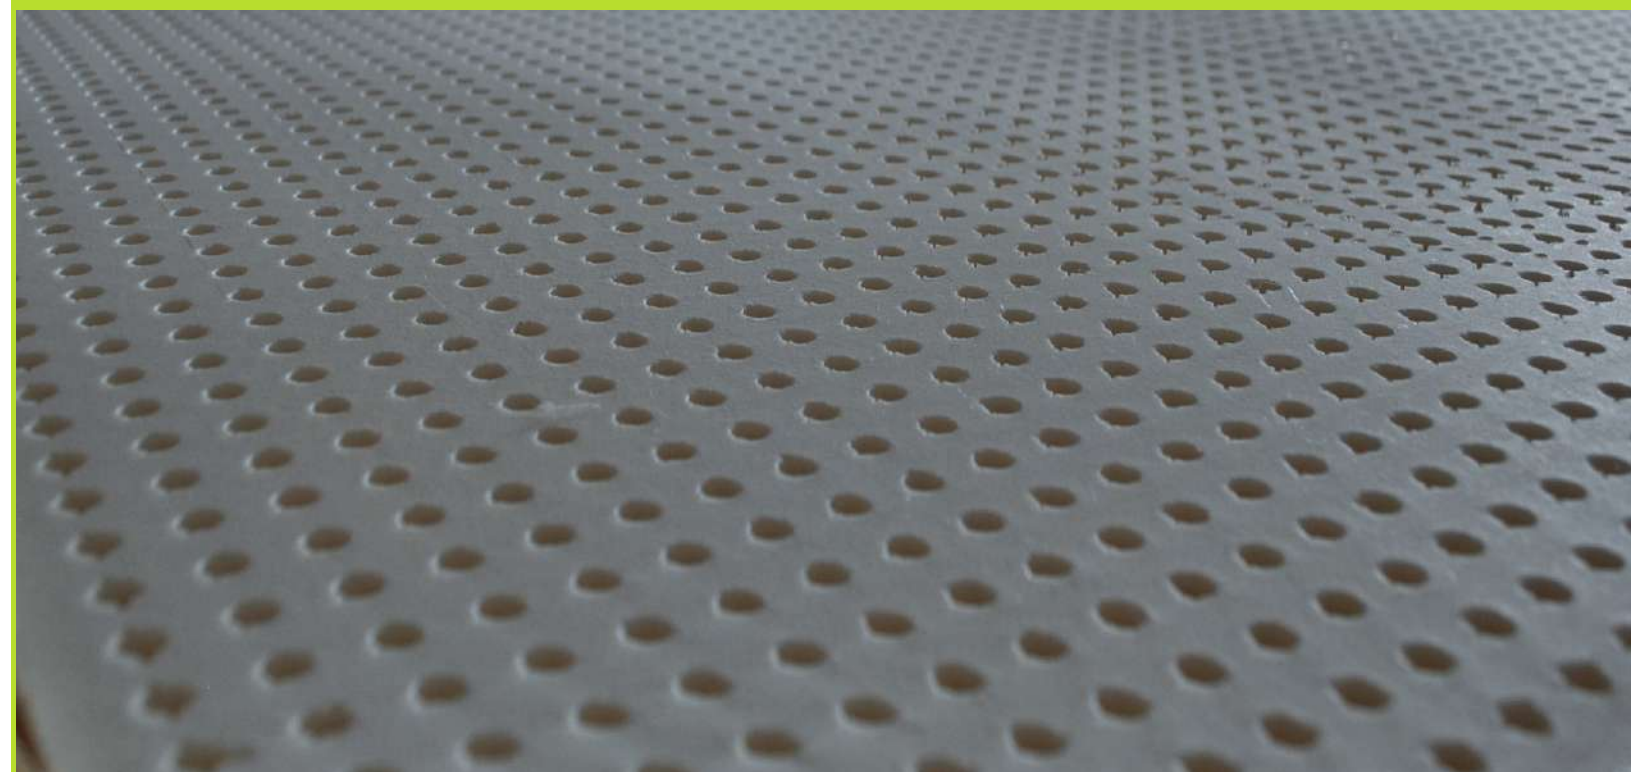

Mattresses for Hospital

Latex is hypo-allergenic, and breathes to keep you warm in winters and cool in summers due to this property maximum Hospitals use Latex Rubber Foam Mattress suitable for all kind of patient. Bacteria, mildew and moth cannot live in latex Rubber Foam. Independent tests prove that Latex Rubber Foam is three times more resilient to dust mites and bacteria than ordinary mattresses.

Sapna Latex Rubber Foam Mattresses ISI with Rexine Cover Specially for Hospital purpose

Mattresses

A latex mattress offers you many benefits and a high quality sleep experience, explaining its popularity.

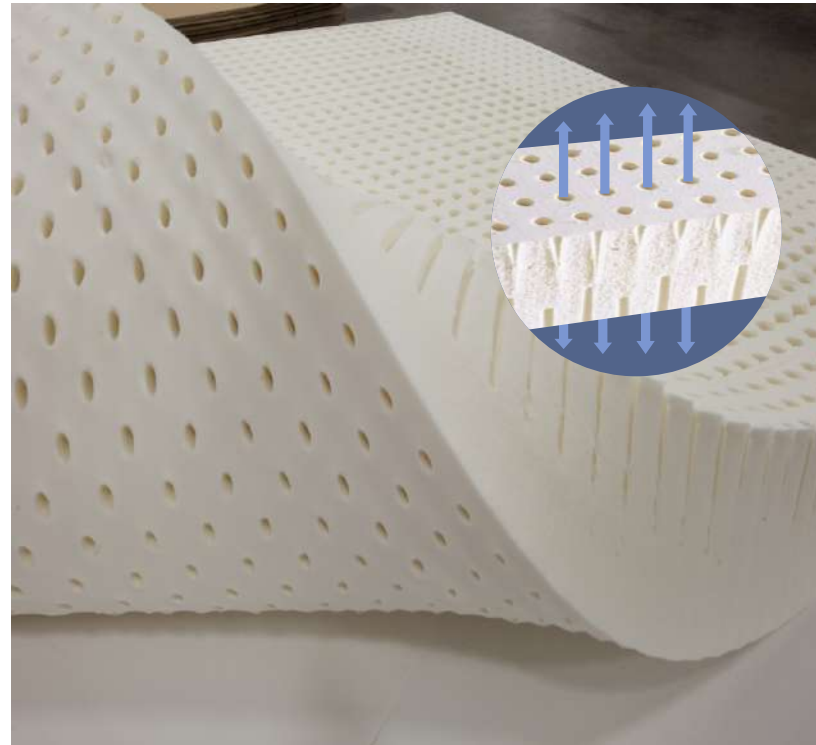

The first of these benefits is its unique balance of soft comfort with proper support for your spine. A latex mattress is also naturally resistant to dust mites, mould and bacteria without the use of added chemicals, and this benefit appeals to many

people. Also, excellent air circulation is provided by the open-cell natural structure of latex and by pinhole patterns purposefully created during manufacturing. This allows for good breathability, resulting in a comfortable sleeping temperature. This is important in warm humid climates such as that of India.

The superb body pressure distribution properties of latex mattresses are also frequently recommended by medical professionals such as chiropractors, physiotherapists and osteopaths as a way to counteract backaches and muscle-aches. An additional benefit of a latex mattress is that it does not transmit movement easily, meaning that if you sleep with a partner, you won't feel their movements on your side of the bed.

Lastly, it is important to note that latex mattresses are one of the most highly durable mattress types available. If you are going to be purchasing a mattress, it makes financial sense to purchase one that will last you for a long time. We offer latex mattress with inner cotton cover. The outer cotton cover is zippered and removable. Standard size 72" x 36" x 4". This is our default crib mattress size, but we can custom fit any crib. We can customise the mattresses of any shape and size as per the client's requirement
